Teaching the Entrepreneurial Mindset Across the University Lisa Bosman,Stephanie Fernhaber,2021-10-07 “It stretches no point to suggest that creativity, innovation and risk-taking will decide our future societal prosperity. We cannot spread those values too widely, so having taught engineering faculty in their first book, these authors now aim to boost the spirit across all disciplines. What a great success for all of us if they succeed.” – Mitchell E. Daniels, Jr., president of Purdue University and former governor of Indiana Despite the relevancy of the entrepreneurial mindset for all career paths, only a small percentage of the higher education student population takes part in entrepreneurially-minded learning opportunities. This gap can be attributed to several factors. From a program perspective, many degrees are already at credit capacity which allows limited room in the existing curriculum to add new courses. From a student perspective, entrepreneurship education is thus positioned as optional and requires extra time (and in some cases tuition) to do so. Finally, from an educator perspective, the majority of faculty members across the university have not been trained in entrepreneurship and may not know where to start. *Teaching the Entrepreneurial Mindset Across the University: An Integrative Approach* overcomes these challenges by providing higher education faculty with a toolkit, including tips and strategies, to integrate the entrepreneurial

mindset into existing courses regardless of discipline. The book is broken into three core parts: Motivation: The importance of the entrepreneurial mindset for all students is established; Design: The Entrepreneurial Mindset Teaching Blueprint is introduced as a tool for integrating entrepreneurially-minded curricular learning experiences within existing courses; Application: Example entrepreneurially-minded curriculum from across the university are provided. By integrating the entrepreneurial mindset across the curriculum, students from all disciplinary backgrounds will be better prepared to enter the workforce, solve complex social issues, and leverage entrepreneurial thinking in their everyday lives. This book is meant for educators who want to make an impact and truly prepare graduates for the real world.

From Science to Business National Research Council, Policy and Global Affairs, Committee on Women in Science, Engineering, and Medicine, 2012-09-14 Scientists, engineers, and medical professionals play a vital role in building the 21st-century science and technology enterprises that will create solutions and jobs critical to solving the large, complex, and interdisciplinary problems faced by society: problems in energy, sustainability, the environment, water, food, disease, and healthcare. As a growing percentage of the scientific and technological workforce, women need to participate fully not just in finding solutions to technical problems, but also in building the organizations responsible for the job creation that will bring these solutions to market and to bear on pressing issues. To accomplish this, it is important that more women in science and engineering become entrepreneurs in order to start new companies; create business units inside established organizations, mature companies, and the government; and/or function as social entrepreneurs focused on societal issues. Entrepreneurship represents a vital source of change in all facets of society, empowering individuals to seek opportunity where others see insurmountable problems. *From Science to Business: Preparing Female Scientists and Engineers for Successful Transitions into Entrepreneurship* is the summary of an August 2009 workshop that assesses the current status of women undertaking entrepreneurial activity in technical fields, to better understand the nature of the barriers they encounter, and to identify

what it takes for women scientists and engineers to succeed as entrepreneurs. This report focuses on women's career transitions from academic science and engineering to entrepreneurship, with a goal of identifying knowledge gaps in women's skills as well as experiences crucial to future success in business and critical for achieving leadership positions in entrepreneurial organizations. From Science to Business makes the case that in addition to educating women scientists and engineers in rigorous problem solving, it is equally important to provide exposure and training to impart the skills that will enable more women to move from the role of expert to that of leader in dynamic new business enterprises. This book will be of interest to professionals in both academia and industry, graduate and post-graduate students, and organizations that advocate for a stronger economy.
