*Preparedness, Response, and Recovery Considerations for Children and Families* Institute of Medicine, Board on Health Sciences Policy, Forum on Medical and Public Health Preparedness for Catastrophic Events, 2014-03-21 *Preparedness, Response and Recovery Considerations for Children and Families* is the summary of a workshop convened in June, 2013 by the Institute of Medicine Forum on Medical and Public Health Preparedness for Catastrophic Events to discuss disaster preparedness, response, and resilience relative to the needs of children and families, including children with special health care needs. Traditional and non-traditional medical and public health stakeholders from across federal, state, and local government health care coalitions, community organizations, school districts, child care providers, hospitals, private health

care providers, insurers, academia, and other partners in municipal planning met to review existing tools and frameworks that can be modified to include children's needs; identify child-serving partners and organizations that can be leveraged in planning to improve outcomes for children; highlight best practices in resilience and recovery strategies for children; and raise awareness of the need to integrate children's considerations throughout local and state emergency plans. Communities across the United States face the threat of emergencies and disasters almost every day, natural and man-made, urban and rural, large and small. Although children represent nearly 25 percent of the U.S. population, current state and local disaster preparedness plans often do not include specific considerations for children and families. The preparedness and resilience of communities related to children will require a systems framework for disaster preparedness across traditional and non-traditional medical and public health stakeholders, including community organizations, schools, and other partners in municipal planning. This report examines resilience strategies that lead to successful recovery in children after a disaster and discusses current approaches and interventions to improve recovery in children.

**Free to Learn** Peter Gray, 2013-03-05 A leading expert in childhood development makes the case for why self-directed learning -- unschooling -- is the best way to get kids to learn. In *Free to Learn*, developmental psychologist Peter Gray argues that in order to foster children who will thrive in today's constantly changing world, we must entrust them to steer their own learning and development. Drawing on evidence from anthropology, psychology, and history, he demonstrates that free play is the primary means by which children learn to control their lives, solve problems, get along with peers, and become emotionally resilient. A brave, counterintuitive proposal for freeing our children from the shackles of the curiosity-killing institution we call school, *Free to Learn* suggests that it's time to stop asking what's wrong with our children, and start asking what's wrong with the system. It shows how we can act—both as parents and as members of society—to improve children's lives and to promote their happiness and learning.

Gail Gibbons explores the many reasons why animals migrate, using direct sentences, maps, infographics, and illustrations. A Child's Work Vivian Gussin Paley, 2009-09-15 The buzz word in education today is accountability. But the federal mandate of no child left behind has come to mean curriculums driven by preparation for standardized tests and quantifiable learning results. Even for very young children, unstructured creative time in the classroom is waning as teachers and administrators are under growing pressures to measure school readiness through rote learning and increased homework. In her new book, Vivian Gussin Paley decries this rapid disappearance of creative time and makes the case for the critical role

of fantasy play in the psychological, intellectual, and social development of young children. A Child's Work goes inside classrooms around the globe to explore the stunningly original language of children in their role-playing and storytelling. Drawing from their own words, Paley examines how this natural mode of learning allows children to construct meaning in their worlds, meaning that carries through into their adult lives. Proof that play is the work of children, this compelling and enchanting book will inspire and instruct teachers and parents as well as point to a fundamental misdirection in today's educational programs and strategies.
