Treatment-resistant Depression (TRD) Deborah Diaz,2017 Major Depressive Disorder (MDD) is a common and debilitating neuropsychiatric disorder with high economic and societal impact. Approximately 30% of subjects with MDD achieve full remission after treatment with conventional antidepressants resulting in a relevant percentage of patients suffering from treatment resistant depression (TRD). Treating TRD is a difficult challenge for psychiatrists due to the complexity of this disabling condition. In fact, TRD is generally associated with a poorer outcome, higher suicidal risk, more severe psychosocial impairment and physical disability when compared to MDD. This book provides new research on treatment options, challenges and the future directions for individuals with TRD.

The Level REER model in the External Balance Assessment (EBA) Methodology Rui Mano,Ms.Carolina Osorio Buitron,Mr.Luca A Ricci,Mr.Mauricio Vargas,2019-09-13 This paper offers an empirical model of the drivers of the level of the Real Effective Exchange Rate (REER) that is now part of the IMF's methodology for the assessment of external positions, including exchange rates. It constructs a measure of the level of the REER and it offers a panel regression that considers a large number of cross-sectional and time varying factors, guided by the extensive literature. Its main contribution is to enhance our understanding of the cross-sectional determinants of the level of the REER, while taking into account the time-series drivers. The framework accounts for the much larger cross-sectional variation of the level REER, and can better explain the time series variation of level REER when these are based on GDP-deflators rather than on consumer price indices. The latter suggest there may be merits to broadening the assessments to include such measures, although further analysis is required.

Green Energy, Environment and Sustainable Development C. Wang,X. Zhang,H. Ren,2023-10-19 The subjects of green energy and sustainability have never been more important, as governments around the world wrestle with the problem of how to protect the planet from the damage being caused to the environment by climate change. This book presents the proceedings of GEESD2023, the 4th International Conference on Green Energy, Environment and Sustainable Development, held in Mianyang, China from 15-17 June 2023 and online via Zoom. The conference aims to gather innovative academicians and industry experts in the fields of green energy, environment, and sustainable development in a common forum, providing

a platform for the exchange of the latest research developments in related fields. This year, the call for papers attracted more than 280 submissions, 138 of which were accepted for inclusion in this collection. The process of evaluation and peer-review took place over six months and involved more than 100 TPC members and reviewers. The book is divided into 7 sections: green energy and systems; computer methods in the environment; chemistry and the environment; ecology and the rural environment; energy, environment and economy; environment and pollution; and water and mineral resources. Papers deal with the most up-to-date findings and technologies. The book provides a valuable overview of the latest research and developments and will be of interest to all those working in the fields of green energy and sustainable development.

The External Balance Assessment Methodology: 2018 Update Mr. Luis M. Cubeddu, Signe Krogstrup, Gustavo Adler, Mr. Pau Rabanal, Mai Chi Dao, Mrs. Swarnali A Hannan, Luciana Juvenal, Ms. Carolina Osorio Buitron, Cyril Rebillard, Daniel Garcia-Macia, Callum Jones, Jair Rodriguez, Kyun Suk Chang, Deepali Gautam, Zijiao Wang, Miss Nan Li, 2019-03-19 The assessment of external positions and exchange rates is a key mandate of the IMF. This paper presents the updated External Balance Assessment (EBA) framework—a key input in the conduct of multilaterally-consistent external sector assessments of 49 advanced and emerging market economies—following the two rounds of refinements adopted since the framework was introduced in 2012 (as described in Phillips et al., 2013). It also presents new complementary tools for shedding light on the role of structural factors in explaining external imbalances and assessing potential biases in the measurement of external positions. Remaining challenges and areas of future work are also discussed.

Mindfulness-Oriented Interventions for Trauma Victoria M. Follette, John Briere, Deborah Rozelle, James W. Hopper, David I. Rome, 2017-09-28 Grounded in research and accumulated clinical wisdom, this book describes a range of ways to integrate mindfulness and other contemplative practices into clinical work with trauma survivors. The volume showcases treatment approaches that can be tailored to this population's needs, such as mindfulness-based stress reduction (MBSR), acceptance and commitment therapy (ACT), dialectical behavior therapy (DBT), mindfulness-based cognitive therapy (MBCT), and mindful self-compassion (MSC), among others. Featuring vivid case material, the book explores which elements of contemplative traditions support recovery and how to apply them safely. Neurobiological foundations of mindfulness-oriented work are examined. Treatment applications are illustrated for specific trauma populations, such as clients with chronic pain, military veterans, and children and adolescents.
