Issues in Computer-Adaptive Testing of Reading Proficiency Micheline Chalhoub-Deville,1999 The focus of this book is computer based assessment of the receptive skills.

Computer-based Language Testing: C-Test vs. Rapid Profile Ana Colton-Sonnenberg,2007-04-02 Seminar paper from the year 2006 in the subject English Language and Literature Studies - Linguistics, grade: 1,0, University of Paderborn, course: Einführung in die Informations- und Kommunikationstechnologien: Electronic Tools and Resources for Linguists, language: English, abstract: Testing is an important part of language teaching. Tests can be used to place students in courses according to their knowledge, to diagnose their strengths and weaknesses, to identify their proficiency etc. There are many theories about what tests should analyse and how they should be taken. Depending on the relevance of the results, tests need to be more or less accurate. Furthermore, they should have a beneficial backwash on teaching. It is thus at least as important to examine testing itself.

Computer-Based Testing Craig N. Mills,Maria T. Potenza,John J. Fremer,William C. Ward,2005-04-11 Although computer-based tests (CBT) have been administered for many years, improvements in the speed and power of computers coupled with reductions in their cost have made large-scale computer delivery of tests increasingly feasible. CBT is now a common form of test delivery for licensure, certification, and admissions tests. Many large-scale, high-stakes testing programs have introduced CBT either as an option or as the sole means of test delivery. Although this movement to CBT has, to a great extent, been successful, it has not been without problems. Advances in psychometrics are required to ensure that those who rely on test results can have at least the same confidence in CBTs as they have in traditional forms of assessment.

This volume stems from an ETS-sponsored colloquium in which more than 200 measurement professionals from eight countries and 29 states convened to assess the current and future status of CBT. The formal agenda for the colloquium was divided into three major segments: Test Models, Test Administration, and Test Analysis and Scoring. Each segment consisted of several presentations followed by comments from noted psychometricians and a break-out session in which presenters and discussants identified important issues and established priorities for a CBT research agenda. This volume contains the papers presented at the colloquium, the discussant remarks based on those papers, and the research agenda that was generated from the break-out sessions. *Computer-Based Testing: Building the Foundation for Future Assessments* is must reading for professionals, scholars, and advanced students working in the testing field, as well as people in the information technology field who have an interest in testing.

How to Pass Computer Programmer Aptitude Tests John J. Jensen, 1967

Designing Training and Instructional Programs for Older Adults Sara J. Czaja, Joseph Sharit, 2016-04-19 Current and emerging trends in the domains of health management and the work sector, the abundance of new consumer products pervading the marketplace, and the desires of many older adults to undertake new learning experiences means that older adults, like their younger counterparts, will need to continually engage in new learning and training. Thus

Computers and Their Impact on State Assessments Robert W. Lissitz, Hong Jiao, 2012-05-01 The Race To The Top program strongly advocates the use of computer technology in assessments. It dramatically promotes computer-based testing, linear or adaptive, in K-12 state assessment programs. Moreover, assessment requirements driven by this federal initiative exponentially increase the complexity in assessment design and test development. This book provides readers with a review of the history and basics of computer-based tests. It also offers a macro perspective for designing such assessment systems in the K-12 setting as well as a micro perspective on new challenges such as innovative items, scoring of such items, cognitive diagnosis, and vertical scaling for growth modeling and value added approaches to assessment. The editors' goal is to provide readers with necessary information to create a smarter computer-based testing system by following the advice and experience of experts from education as well as other industries. This book is based on a conference (<http://marces.org/workshop.htm>) held by the Maryland Assessment Research Center for Education Success. It presents multiple perspectives including test vendors and state departments of education, in designing and implementing a computer-based test in the K-12 setting. The design and implementation of such a system requires deliberate planning and thorough considerations. The advice and experiences presented in this book serve as a guide to practitioners and as a good source of information for quality control. The technical issues discussed in this book are relatively new and unique to K-12 large-scale computer-based testing programs, especially due to the recent federal policy. Several chapters provide possible solutions to psychometricians dealing with the technical challenges related to innovative items, cognitive diagnosis, and growth modeling

in computer-based linear or adaptive tests in the K-12 setting.
