Faces of History Donald R. Kelley, 1998-01-01 In this book, one of the world's leading intellectual historians offers a critical survey of Western historical thought and writing from the pre-classical era to the late eighteenth century. Donald R. Kelley focuses on persistent themes and methodology, including questions of myth, national origins, chronology, language, literary forms, rhetoric, translation, historical method and criticism, theory and practice of interpretation, cultural studies, philosophy of history, and historicism. Kelley begins by analyzing the dual tradition established by the foundational works of Greek historiography--Herodotus's broad cultural and antiquarian inquiry and the contrasting model of Thucydides' contemporary political and analytical narrative. He then examines the many variations on and departures from these themes produced in writings from Greek, Roman, Jewish, and Christian antiquity, in medieval chronicles, in national histories and revisions of history during the Renaissance and Reformation, and in the rise of erudite and enlightened history in the seventeenth and eighteenth centuries. Throughout, Kelley discusses how later historians viewed their predecessors, including both supporters and detractors of the authors in question. The book, which is a companion volume to Kelley's

highly praised anthology *Versions of History from Antiquity to the Enlightenment*, will be a valuable resource for scholars and students interested in interpretations of the past.

Architects' Data Ernst Neufert, Peter Neufert, 1991-01-15 This is an essential aid in the initial design and planning of a project. The relevant building type is located by a comprehensive index and cross reference system, a condensed commentary covers user requirements, planning criteria, basic dimensions and other considerations of function, siting aspect etc. A system of references based on an extensive bibliography supports the text. In every section plans, sections, site layouts, design details and graphs illustrated key aspects of a building type's design. Most illustrations are dimensioned or scaled - the metric system of measurement is used throughout, and the equivalent in feet/inches can easily be read either off a graphic scale on the page or from the built-in conversion table. The illustrations are international in origin and include both well know and less famous designers. *Architects Data* is primarily a handbook of building types rather than of construction techniques and details. However its treatment of components (such as doors and windows) and of spaces for building services is extremely thorough, since consideration of this data is an essential element of the planning process. The opening pages of basic data on man and his buildings cover critical subjects such as scale, drawing practice, noise, light and space for the same reason. Particular attention has also been paid to the implications of energy conservation, means of escape from fire and the needs of the elderly and the disabled.
