Wolfgang Guggemos

Old Masters Rock M. Nottebohm, 2017-05 This book demystifies western art and demonstrates that it is accessible to all of us--adults and children alike ... It introduces the type of questions that help us discover things about a work of art and how we feel about it ... Throughout, the emphasis is on looking at the paintings and drawing one's own conclusions about what one is seeing. Grouped into thirteen themes, ... 50 paintings from the fourteenth century through to the early twentieth century are featured--Publisher's website.

Muslims and the New Information and Communication Technologies Thomas Hoffmann, Göran Larsson, 2014-01-10 This volume deals with the so-called new Information and Communication Technologies (ICT) and their interrelationship with Muslims and the interpretation of Islam. This volume taps into what has been labelled Media Studies 2.0, which has been characterized by an intensified focus on everyday meanings and 'lay' users - in contrast to earlier emphases on experts or self-acclaimed experts. This lay adoption of ICT and the subsequent digital 'literacy' is not least noticeable among Muslim communities. According to some global estimates, one in ten internet users is a Muslim. This volume offers an ethnography of ICT in Muslim communities. The contributors to this volume also demonstrate a new kind of moderation with regard to more sweeping and avant-gardistic claims, which have characterized the study of ICT previously. This moderation has been combined with a keen attention to the empirical material but also deliberations on new quantitative and qualitative approaches to ICT, Muslims and Islam, for instance the digital challenges and changes wrought on the Qur'an, Islam's sacred scripture. As such this volume will also be relevant for people interested in the study of ICT and the blooming field of digital humanities. Scholars of Islam and the Islamic world have always be engaged and entangled in their object of study. The

developments within ICT have also affected how scholars take part in and influence public Islamic and academic discussions. This complicated issue provides basis for a number of meta-reflexive studies in this volume. It will be essential for students and scholars within Islamic studies but will also be of interest for anthropologists, sociologists and others with a humanistic interest in ICT, religion and Islam.

Medical Image Processing Geoff Dougherty, 2011-07-25 The book is designed for end users in the field of digital imaging, who wish to update their skills and understanding with the latest techniques in image analysis. The book emphasizes the conceptual framework of image analysis and the effective use of image processing tools. It uses applications in a variety of fields to demonstrate and consolidate both specific and general concepts, and to build intuition, insight and understanding. Although the chapters are essentially self-contained they reference other chapters to form an integrated whole. Each chapter employs a pedagogical approach to ensure conceptual learning before introducing specific techniques and "tricks of the trade". The book concentrates on a number of current research applications, and will present a detailed approach to each while emphasizing the applicability of techniques to other problems. The field of topics is wide, ranging from compressive (non-uniform) sampling in MRI, through automated retinal vessel analysis to 3-D ultrasound imaging and more. The book is amply illustrated with figures and applicable medical images. The reader will learn the techniques which experts in the field are currently employing and testing to solve particular research problems, and how they may be applied to other problems.

Labyrinthine Defects as Shown by Ataxia and Caloric Tests Alfred R. Fregly, Ashton Graybiel, 1968 Groups of individuals with various loss or disturbance of labyrinthine function (N=49) and patients who had vertigo as a major symptom or complaint (N=76) were very different from a control group of normals (N=240) in the frequency with which their ataxia test battery performance scores and threshold caloric test responses fell within the lowest 5 per cent of the normative distributions. Generally, caloric test results could be predicted from ataxia test results better than results of ataxia tests from those of caloric tests in the various groups. In those individuals with total or near total loss of labyrinthine function all test findings were in perfect or near perfect agreement in relation to the 5th percentile cut-off criterion employed.
