*Going Back to School with District Worker's Compensation and Employee Safety Programs* Diane K. Schweitzer, PhD, RN, CSR,2013-09-07 When school administrators think of school safety, they frequently think of student safety and security. School district administrators need also to be concerned about the safety of all adult workers including certified and classified employees e.g. administrators, teachers, secretaries, custodians, foodservice workers, nurses, administrators, bus drivers, maintenance personnel and others. Losses from injuries to employees result in disruption of the educational process, lost days from work increased insurance premiums and consequent loss of funding for core educational initiatives. Injuries can diminish in frequency and severity or be avoided almost entirely if administrators implement health and safety systems. The cost of providing medical care to injured employees establishes baseline data on which worker compensation premiums are assessed. Administrators could reinvest costs saved in workers compensation insurance premiums into educational programs for the direct benefit of students. A comprehensive safety system that confirms administration commitment to a safe working environment assures management commitment as a legal and ethical responsibility, promotes employee involvement, pinpoints and eliminates potential hazards, and encourages employees to prevent potential harm to other employees, teaching staff, and students. This text focuses on developing a successful workers compensation program and safety system for school district employees. The models and strategies may be adapted for use in school districts for reducing school injuries. School district administrators are frequently forced to do more with less funding, particularly considering the requirement to implement many unfunded mandates from state and federal governments. Dollars saved from improved worker safety and reduction of insurance premiums may directly benefit educational initiatives in school districts. Primarily, the funds for educating students may originate from saved workers compensation dollars.

Managing Workers' Compensation Keith Wertz,James J. Bryant,2000-12-07 Workers' compensation causes headaches throughout all levels of an organization. Injuries affect production, costs, and morale. *Managing Workers' Compensation: A Guide to Injury Reduction and Effective Claim Management* lays out - in logical order - management and safety procedures that reduce injuries and the aggravation that follows. The authors cover hiring, training, and managing employees with injury avoidance in mind. They provide a blueprint for dealing with injured employees and their families, and for determining the correct time for the employee to return to work. The book discusses the all-important issues of fraud, modified duty, substance abuse testing and accident investigations. It also provides guidance for managing your organization's safety efforts in a manner that targets workers' compensation cost control as one of its major objectives. In addition to comprehensive coverage of workers' compensation, the book gives you a thorough explanation of additional sources of assistance, including the availability and utility of Internet safety resources, a complete listing of state workers' compensation agencies, and sample checklists that help you evaluate your workplace. Although workers' compensation laws vary from state-to-state, the principles behind the system and the ability of employers to influence their own premiums remain consistent. By gaining a thorough understanding of these principles and implementing proven cost control strategies, you can realize substantial savings. *Managing Workers' Compensation: A Guide to Injury Reduction and Effective Claim Management* explains the process by which premiums are calculated and shows how you can impact - favorably - the amount your organization pays in premiums.

*Musculoskeletal Disorders and the Workplace* Institute of Medicine,National Research Council,Commission on Behavioral and Social Sciences and Education,Panel on Musculoskeletal Disorders and the Workplace,2001-06-24 Every year workers' low-back, hand, and arm problems lead to time away from jobs and reduce the nation's economic productivity. The connection of these problems to workplace activities-from carrying boxes to lifting patients to pounding computer keyboards-is the subject of major disagreements among workers, employers, advocacy groups, and researchers. *Musculoskeletal Disorders and the Workplace* examines the scientific basis for connecting musculoskeletal disorders with the workplace, considering people, job tasks, and work environments. A multidisciplinary panel draws conclusions about the likelihood of

causal links and the effectiveness of various intervention strategies. The panel also offers recommendations for what actions can be considered on the basis of current information and for closing information gaps. This book presents the latest information on the prevalence, incidence, and costs of musculoskeletal disorders and identifies factors that influence injury reporting. It reviews the broad scope of evidence: epidemiological studies of physical and psychosocial variables, basic biology, biomechanics, and physical and behavioral responses to stress. Given the magnitude of the problem—approximately 1 million people miss some work each year—and the current trends in workplace practices, this volume will be a must for advocates for workplace health, policy makers, employers, employees, medical professionals, engineers, lawyers, and labor officials.

**Reporting Accidents and Incidents at Work** Great Britain. Health and Safety Executive,2013-10 From 1 October 2013, RIDDOR 2013 comes into force, which introduces significant changes to the existing reporting requirements. The main changes are to simplify the reporting requirements in the following areas: the classification of major injuries to workers is being replaced with a shorter list of 'specified injuries'; the previous list of 47 types of industrial disease is being replaced with eight categories of reportable work-related illness; fewer types of dangerous occurrence require reporting. This leaflet aims to help employers and others with reporting duties under RIDDOR, to comply with RIDDOR and to understand reporting requirements.
