*Creating Digital Exhibits for Cultural Institutions* Emily Marsh,2023-03-28 Creating Digital Exhibits for Cultural Institutions will show you how to create digital exhibits and experiences for your users that will be informative, accessible and engaging. Illustrated with real-world examples of digital exhibits from a range of GLAMs, the book addresses the many analytical aspects and practical considerations involved in the creation of such exhibits. It will support you as you go about: analyzing content to find hidden themes, applying principles from the museum exhibit literature, placing your content within internal and external information ecosystems, selecting exhibit software, and finding ways to recognize and use your own creativity. Demonstrating that an exhibit provides a useful and creative connecting point where your content, your organization, and your audience can meet, the book also demonstrates that such exhibits can provide a way to revisit difficult and painful material in a way that includes frank and enlightened analyses of issues such as racism, colonialism, sexism, class, and LGBTQI+ issues. Creating Digital Exhibits for Cultural Institutions is an essential resource for librarians, archivists, and other cultural heritage professionals who want to promote their institution's digital content to the widest possible audience. Academics and students working in the fields of library and information science, museum studies and digital humanities will also find much to interest them within the pages of this book.

Computing in the Web Age: A Web-Interactive Introduction Robert J. Dilligan, 2007-05-08 This book reflects thirty years of experience in the applications of computer technology to literary research and instruction and in consulting work in office automation and system integration. In that time I have again and again found myself in the position of having to introduce students, both undergraduate and graduate, colleagues and clients to the fundamentals of computer hardware and software. Over the years, as computers became both central and commonplace in professional life, I have been aware of changing attitudes toward this technology. From attitudes that ranged from the disdain of platonic dialecticians for mere technology to intimidation bordering at times almost on terror, people have moved to incorporate this new technology into their frame of reference ( *humani nil a me alienum* ). The development of the microprocessor and its subsequent use for word processing marked one important watershed. The widespread use of word processors made it more likely than not that people would own their own computers, at least at work, and use them as part of their work-a-day activities. But while word processing provided some increased familiarity with computers, it did not lead most individuals much beyond a knowledge of the usual incantations needed to control the MultiMate or Nota Bene or Word Perfect golam and, as a result of unhappy experience, a begrudging acceptance of the need to make back up copies of important files.
